Summary

$\phi(1020)$:
- Increase of enhancement with centrality
- C+C / Pb+Pb scaling with R-b/2
- Slight increase of T with centrality
- No change of line shape

$\overline{K}(892)$:
- Signals observed
- Needs full statistics

$\Lambda(1520)$:
- Suppression in Pb+Pb compared to pp already visible in p+Pb
- Interactions of secondaries ? (UrQMD : loss ca. 50%)
